

Many homeowners are frustrated with the weak, sputtering showers that come with insufficient water pressure.

With a Franklin Electric SubDrive system, your customers can run the water they need, when they need it, and still have strong, steady pressure.

SubDrive: Constant Pressure Solutions

Variable frequency technology has allowed us to vastly improve home water systems by virtually eliminating pressure fluctuations. Whether you're dealing with city water or a private well system, Franklin SubDrive systems are available in a variety of models to fit your customers' needs.

Private Well Systems

Franklin provides constant pressure solutions for two-wire, three-wire and three-phase private wells. SubDrives can be retro-fitted to existing systems, which means you don't have to pull the pump.

Municipal/City Water Systems

Franklin offers an affordable solution for homeowners not satisfied with the water pressure they receive from their city water provider. The SubDrive Inline 1100 is a simple, efficient product that allows homeowners to boost and maintain pressure, regardless of water usage.

Not Sure About Constant Pressure?

If your private well customers aren't sure if a constant pressure system is right for them, take them on a test drive. A Test Drive Kit is available for homeowners who want to experience constant pressure before investing. Customers can try a three-wire constant pressure system in their home for a short time, and then decide if constant pressure is right for them.

Grow your business with the innovative SubDrive constant pressure systems family. For more information on Franklin Electric constant pressure products contact your local distributor or visit www.constantpressure.com.
