***The
Pressure's
On!***

Enjoy the benefits of constant pressure in your home water system.

Finally! A water system that fits your lifestyle.

You've probably noticed that your washing machine fills more slowly when your dishwasher is running, or

that your shower sputters when your sprinkler turns on. You don't like it, but you live with it.

You need a water system that works for you.

Now you have a choice.

Variable speed technology has allowed us to vastly improve your home water system by virtually eliminating pressure fluctuations. With a constant pressure system, you don't have to schedule your day around your water usage. You can do what you want, whenever you want.

You need a water system that can handle the pressure.

Your life is full. You need to make the most of every minute of every day. You have a lot to get done, and not much time to do it. Franklin Electric's SubDrive family of constant pressure controllers can give you what you need.

SubDrive controllers continuously monitor water demand and adjust the speed of your pump to provide the water you need without pressure fluctuations. With a SubDrive controller, your shower won't slow to a trickle when someone turns on another faucet!

You need to do what you want, whenever you want.

SubDrive controllers are available in whatever size you need to meet your household's varying water demands. With a SubDrive controller, the pressure's on!

In a Franklin Electric constant pressure system, a pressure sensor continually adjusts the speed of the pump to match water demand. Instead of draining and filling a large tank, this system pumps more or less water, as you need it.

In addition, all Franklin constant pressure systems feature

- smooth, quiet operation
- a wide variety of pressure settings
- built-in pump protection

You can also use a much smaller pressure tank and reclaim much needed space.

Franklin systems are available in a variety of models so you are sure to find one suited to your needs. Ask your local contractor about the SubDrive family: MonoDrive, SubDrive75, SubDrive150 and SubDrive300.
